

The Logitech Connect is a mobile conference camera with Bluetooth functionality, a built-in microphone, speakers and a webcam, and is ideal for small meeting rooms, home offices and when you're on the move.

If possible, place the camera on your desk or conference table. Press and hold the power button until you hear a beep.

Connect the camera to your laptop using the USB cable provided. If necessary, connect the camera to a power source using the mains adapter provided. The camera has a built-in battery which, when fully charged, provides enough power for 3 hours of video calls or 15 hours of audio calls.

The camera is automatically detected by the laptop. In the conferencing software, you can now select "ConferenceCam Connect" as your microphone and camera.

Using the remote control, you can adjust the volume, zoom in or out, pan the camera, answer and end calls, and mute the microphone.

To pair a Bluetooth device, press and hold the icon on the camera until the LED ring flashes blue. You can then connect via your smartphone, tablet or laptop to play music and make calls.

Connect a display using an HDMI cable and select Wireless Screen mode. Open the screen mirroring option on your mobile device. You can now share content from your mobile device.
