

Polycom Studio - Video Conference

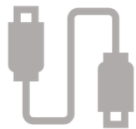

Website DigiLLabs

The **Polycom Studio** conference camera provides an inbuilt microphone, speakers and a self-adjusting camera system. The microphone is designed to pick up sound in a 3,7m perimeter.

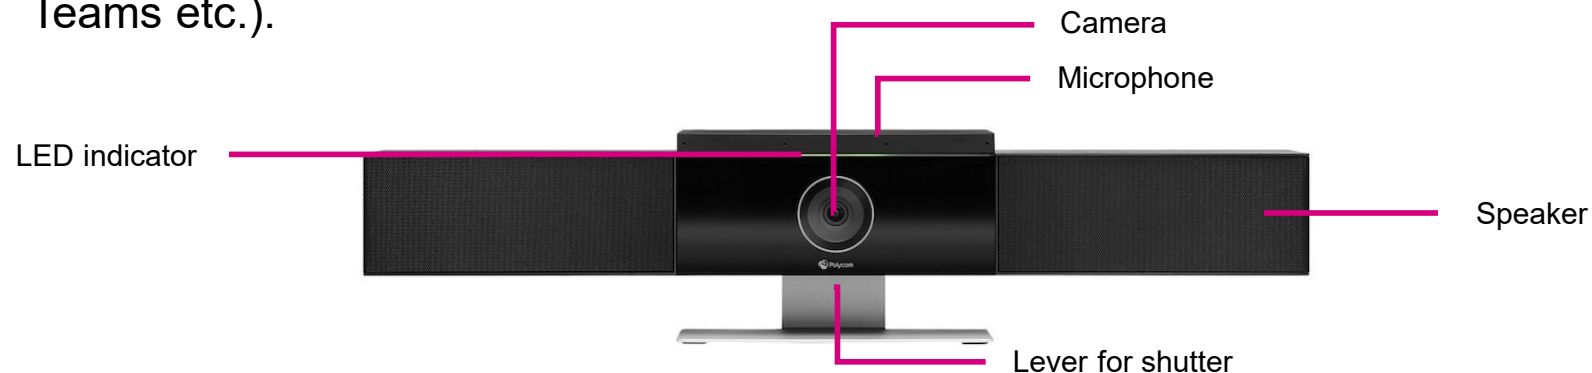

Place the camera at eye level, in front of the speaker.

Connect the camera via the supplied USB-cable. The USB-C connector connects to the camera, while the larger USB connector is connected to your computer or SMART-Board. Don't forget to power Polycom Studio with the provided power supply.

The computer will automatically recognize the camera. Make sure to select Polycom Studio as active “Microphone and Camera” in your preferred conference software (e.g. Zoom, Teams etc.).

The remote enables you to easily adjust the volume, to zoom in and out, to pan the focus, to mute the audio of your recording as well as joining and leaving meetings.

Buttons “1” and “2” recall presets. Adjust the camera to your desired settings and press/hold “1” or “2” to save the setting. “Follow Speaker – on/off” engages or disengages auto focus and panning set on the speaker/presenter

To connect to a Bluetooth enabled device, press/hold the Bluetooth button on the remote. This enables you to use a Phone/Computer/Tablet in conjunction with Polycom Studio to join video conferences or to listen to music.
