

SCIENTIA International & Postdoc

What qualifications, competencies, and skills does a female scientist need to successfully fill an academic leadership position after her doctorate and manage the associated work tasks profitably?

In workshops and training sessions, the SCIENTIA international and postdoc program focuses on interdisciplinary and personal skills such as leadership, performance, acquiring third-party funding and other key areas that are required between the doctorate and early habilitation phase. Participants are also supported in finding a mentor to advance their strategic career planning .

target group: female (international) scientists with a doctorate who want to plan their future career.

SCIENTIA

Program 2025

January 16 & 17 // 9 am - 4:30 pm
